

Pulp and Paper Industry Digital Business Transformation in Action in the Fast-Changing Digital and Business World

ASEAN Pulp and Paper Summit, Putrajaya, Malaysia
November 13, 2024

Jarmo Ropponen, Head of Asia-Pacific, Head of Tissue and CEO Malaysia

TietoEVRY Industry, Pulp, Paper and Fibre

Greetings from Finland & Now Here in Kuala Lumpur Malaysia

The Happiest Country in the World

Tietoevry #1 in Pulp & Paper Industry Specific MES/ERP Solutions

Agenda

Industry Trends & Digital Evolution

Data-Driven Operations

The Promise of AI

Sustainability Meets Digitalization

Summary and Takeaway Message

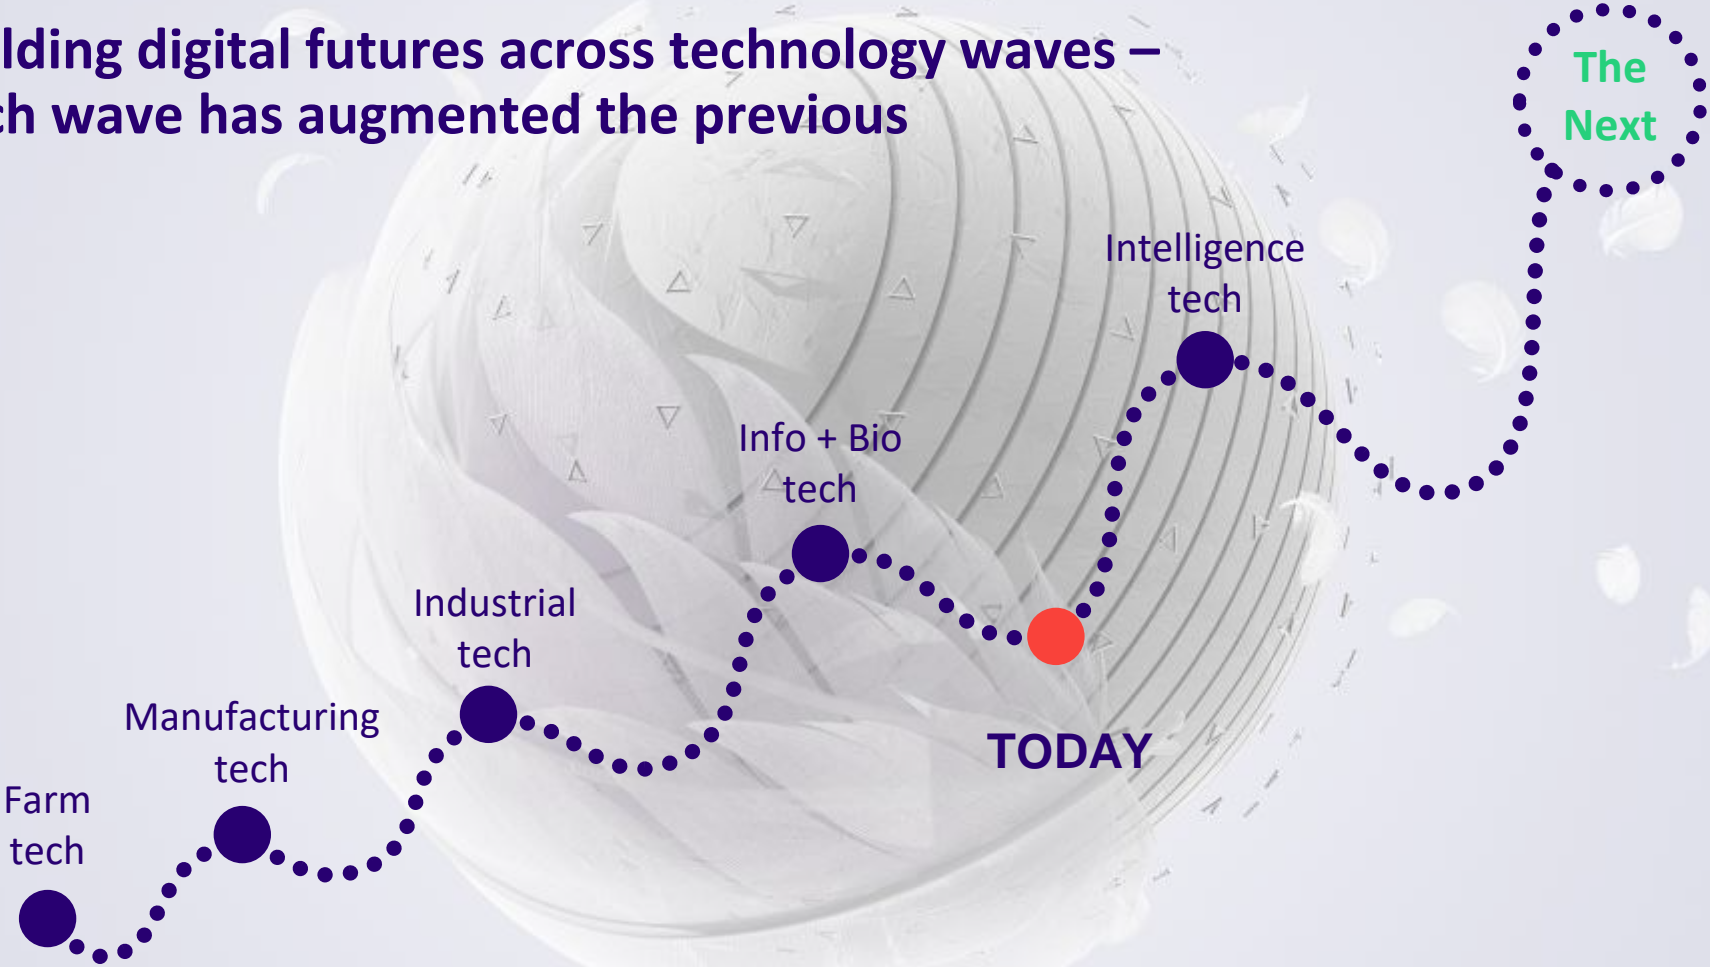

Industry Trends & Digital Evolution

 tietoevry

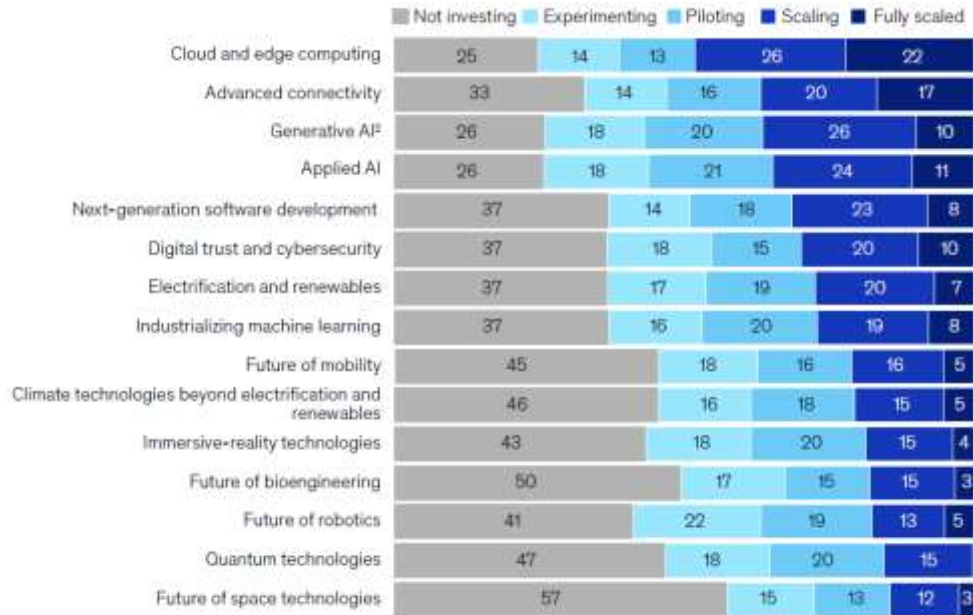

Building digital futures across technology waves – each wave has augmented the previous

Status of Digital Technology Implementation

Self-reported adoption level by tech trend, 2023,¹ % of respondents

Leveraging the new technology to support a Digital transformation is a complex process that will require to partner with technology provider that will support the deployment at scale.

¹ Respondents may interpret these categories differently based on their organizations. As such, the results should be considered as indicative of organizations' self-assessments, rather than precise measurements. ² For a deeper look at our AI-related trends, see ³ The state of AI in early 2024: Gen AI adoption spikes and starts to generate value, McKinsey, May 30, 2024. Source: McKinsey technology adoption survey data

Global Tissue Study 2022 Reflections – Top Focus Areas (By Experience Very Valid for Pulp & Paper Industry in General)

Sustainability: Hand in hand with Profitability

What capital investments are planned within the next 2 years at your tissue mill sites with respect to energy efficiency and savings?

MES = Manufacturing Execution System is the most important development area by CEOs

People part is the most important one for all companies by far.

What are your top 3 focus areas for the next 2 years?

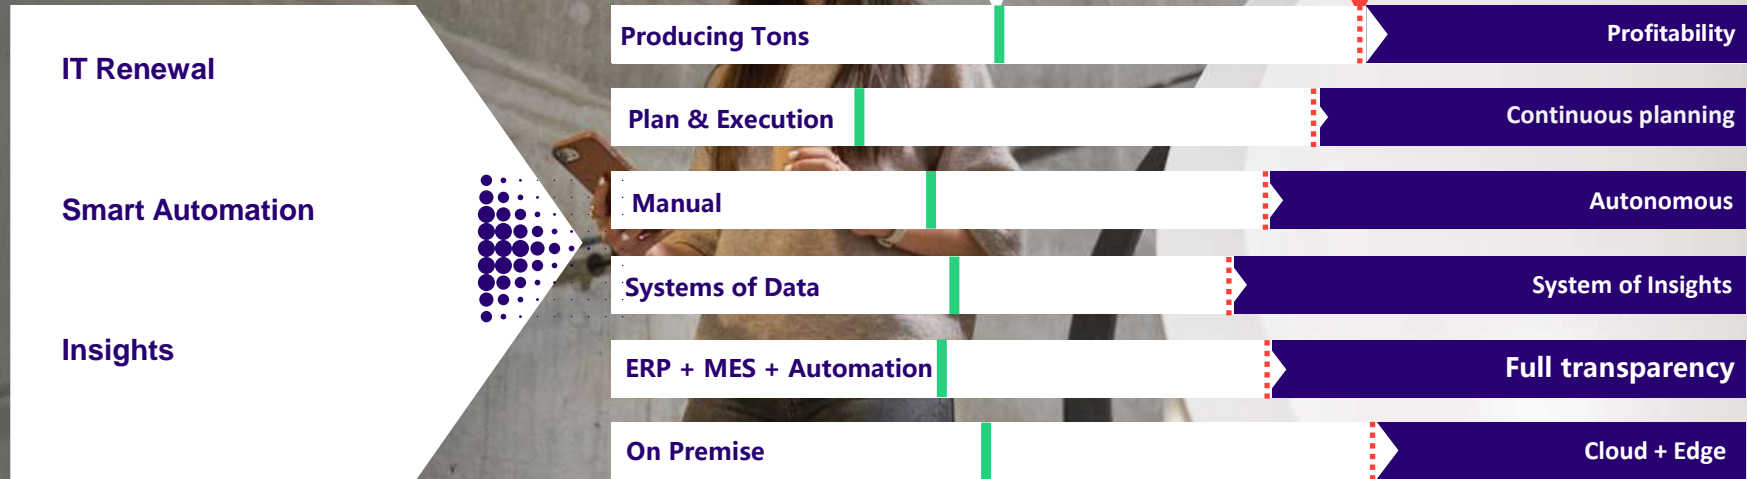

Drivers to Design Future IT Solution

“Business clock is ticking faster and faster”

Many customers are looking for standard solutions without losing own strengths and operational efficiency

Our industry is consistently progressing to an AI native world

Customer priorities

Efficiency

Agility

Competitiveness

Technology and services evolution

Traditional

Infra led world

Cloud native

Application led world

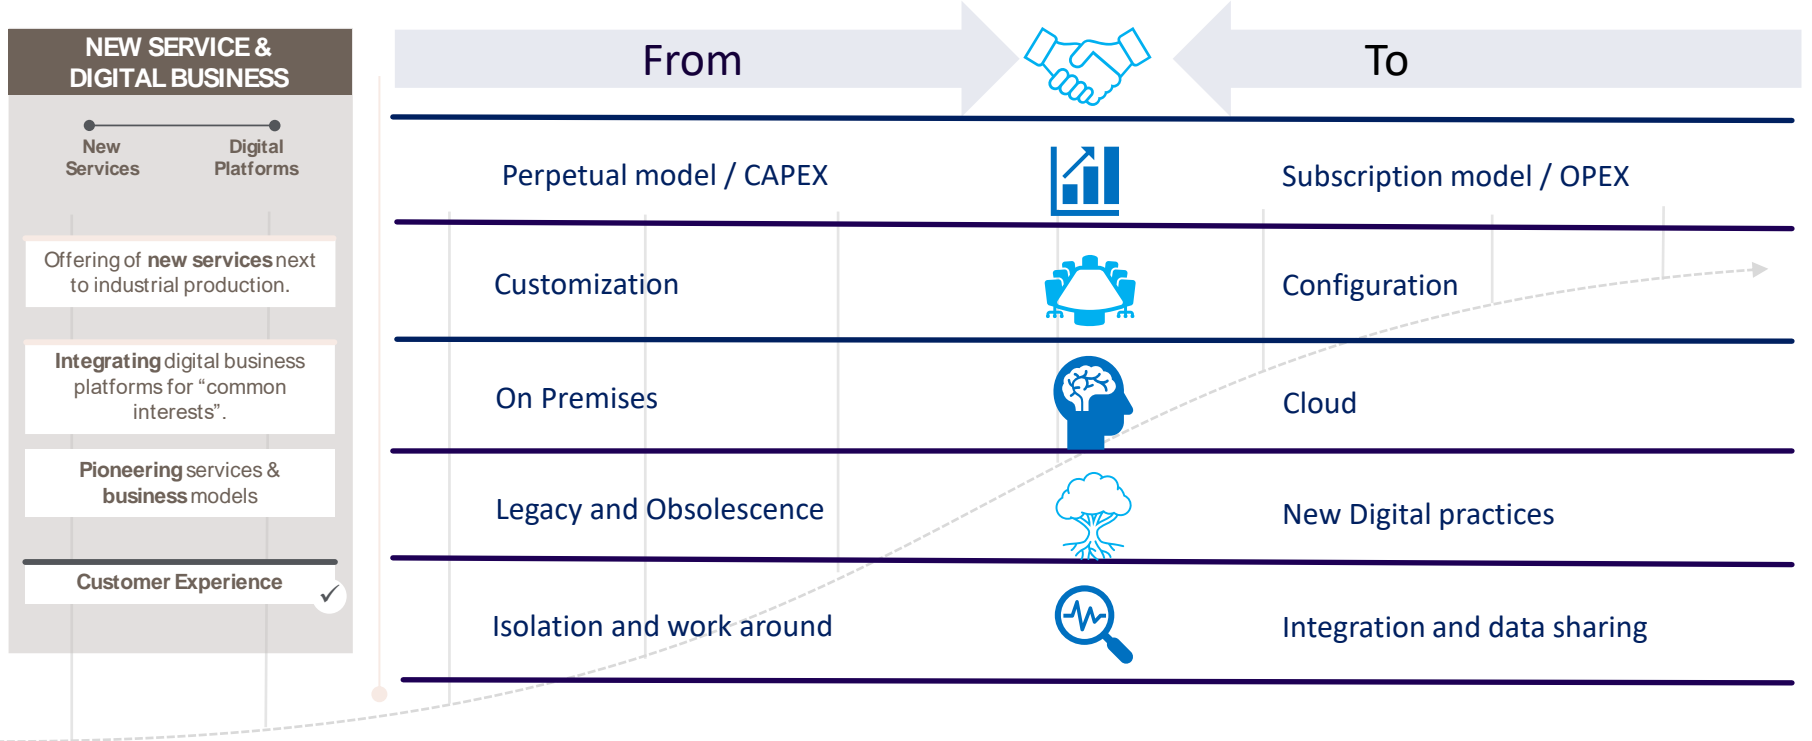

AI-augmented

Data led world

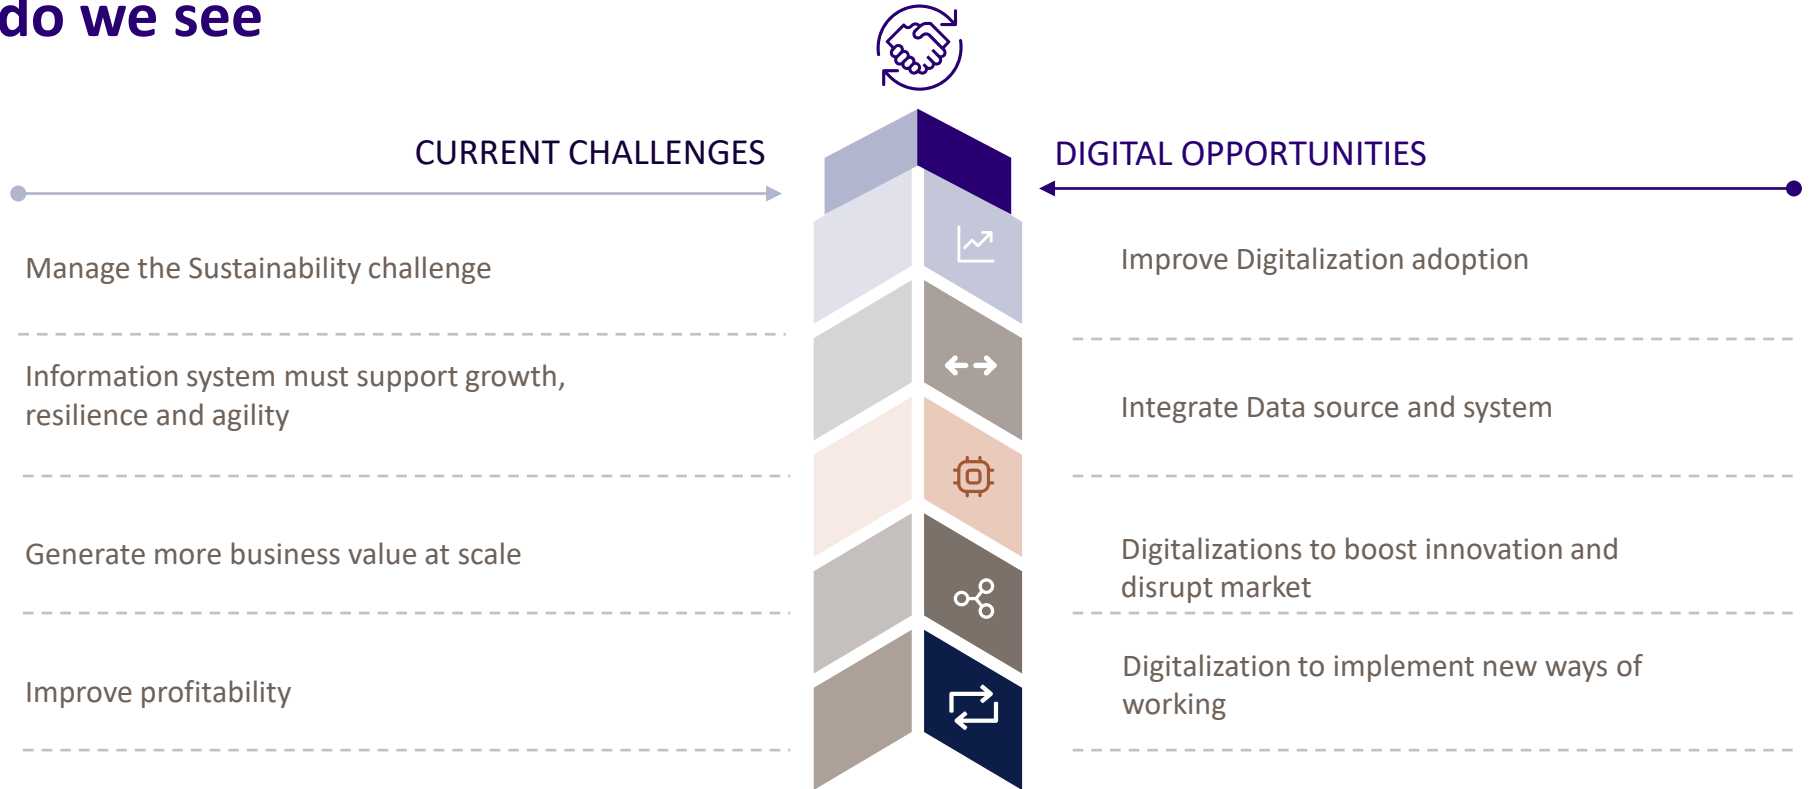

Technology evolution and demand

Increased Digital Focus with Major Shifts in Behaviors

New Technology will support business expectation but comes with new behavior.

Business Perspective: What do we see

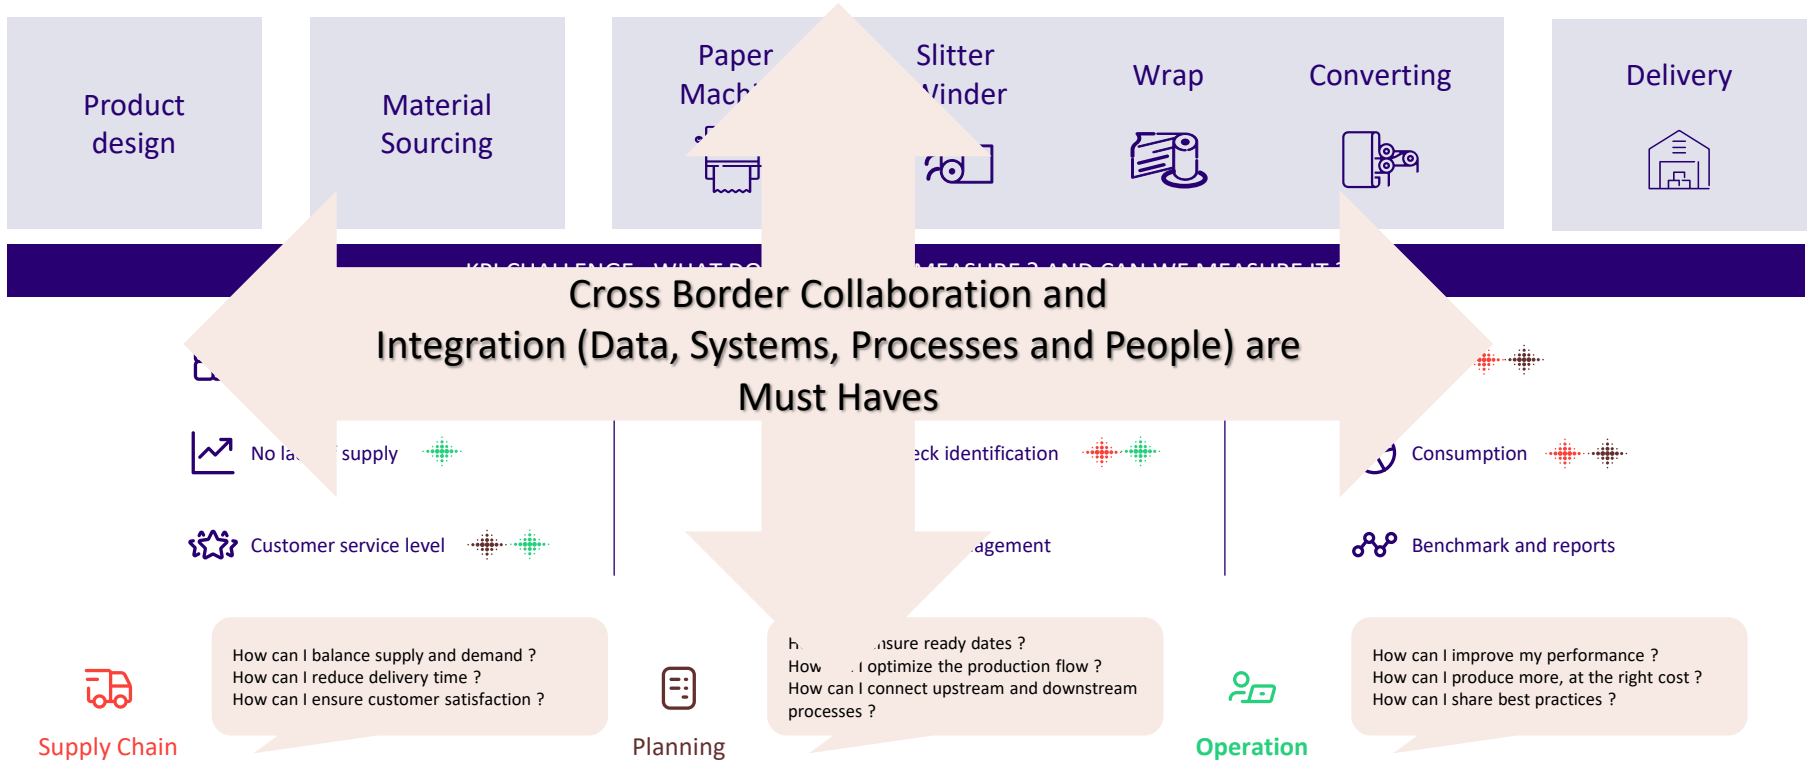

Rising constraint and pressure to maintain a **high level** of **performance** and **profitability** ↗

Data Driven Operations

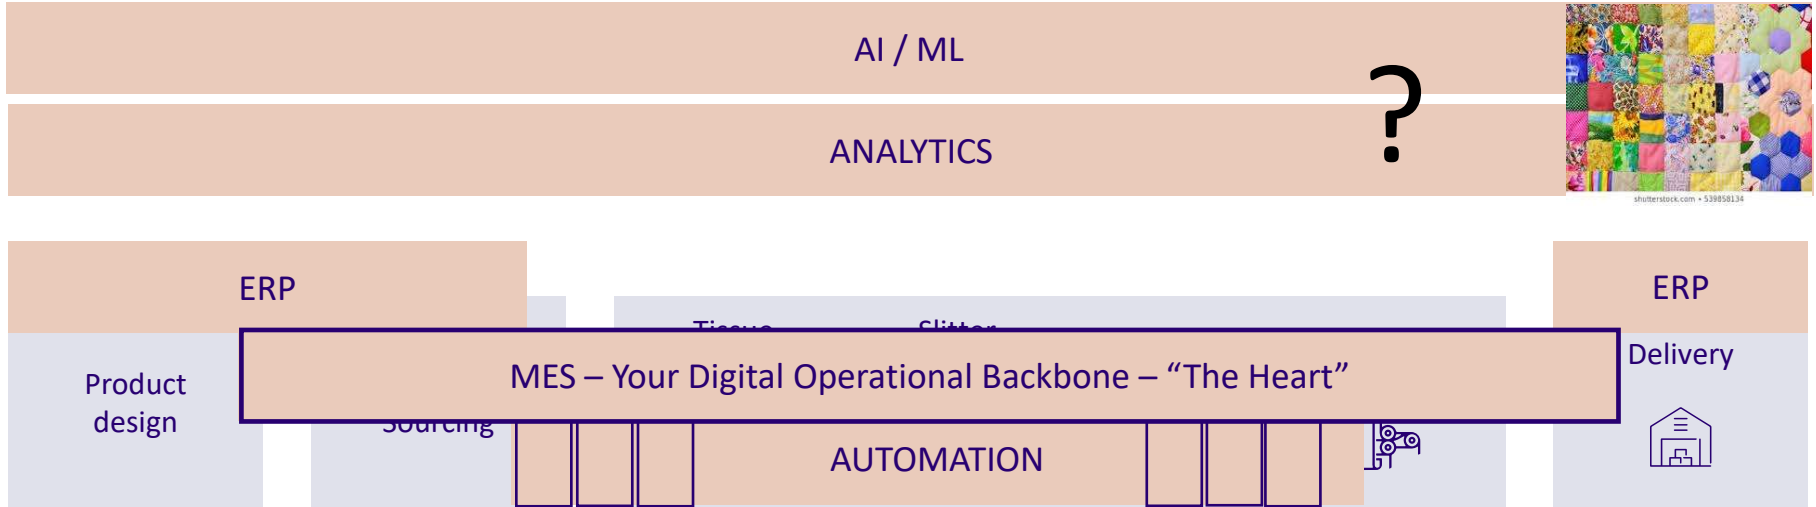

Data Driven Operations – The KPI Challenge

HOW DO WE ACCESS THE INFORMATION TO MAXIMIZE PERFORMANCE ?

Data Driven Operations – End to End functional integration supported by the technology

Data analytics

- Team/Morning meeting report
- Benchmarks
- Best practices identification
- Continuous improvements

MES

- Production tracking
- Quality data integration (lab, QCS, WIS ...)
- Predicting quality (soft sensors)
- Insight with diagnostic analytics

Supply Chain Management

- Supply/demand
- Inventory levels
- Customer service

Operational effectiveness and efficiency – processes, tools and people illustration

What is your company's way of working across the operations?

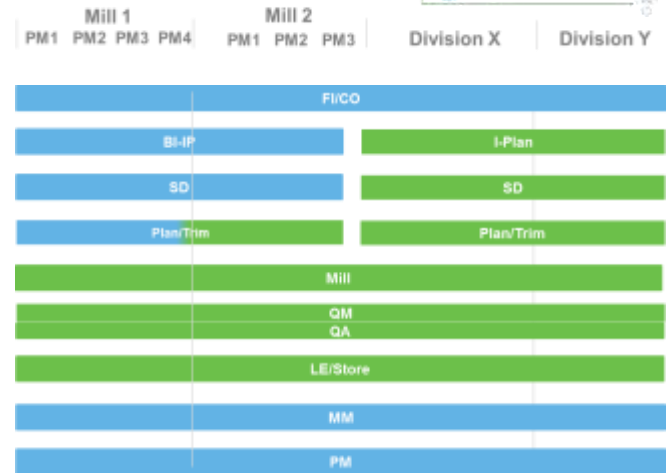

- Finance and Controlling
- Sales & Operations Planning
- Sales and Customer Management
- Production Planning
- Production
- Quality Management
- Logistics
- Purchasing
- Plant Maintenance

OR

Conclusion: True industry know-how is needed to succeed and to establish E2E (end-to-end) integrated business processes for a common way of working with the help of digitalization

Operational Effectiveness and Efficiency – Steps for Digitalized Solutions and Services

Digitalization in the Industry

Start with the Digital Foundation to
Establish Your Operational Digital Backbone

The Promise of AI

AI Transformation Opportunities

Enrich employee experiences

Reinvent customer engagement

Reshape business processes

Bend the curve on innovation

\$3.5

For every \$1 a company invests in AI, it is realizing an average return of

14 months

Average time it takes for organizations to realize a return on their AI investment

E-Learnings will Save Time and Costs while Speeding Up Projects and Ensuring the End Users Know-How

- Why E-Learnings?
 - Valuable F2F training time can be used to apply the knowledge and answer questions instead of knowledge transfer
 - Less F2F training time required which reduces travel time and travel expenses
 - Training availability (when & where you want, at your own pace)
 - Faster, more efficient roll-outs
 - Know your people know-how with certifications – “End Use Driver's License”

The screenshot displays an SAP e-learning interface. At the top, there's a header with the URL 'https://cdn.talendtm.com/engine/V2.7/js/orm_popup.js' and a 'TIPS' logo. The main content area is titled 'Master Data - Recipes maintenance'. It features a 'Main functionality' section with text: 'Production Recipes are maintained for the complete production process. Weet recipe(s) to produce the material, Packing recipe(s) to format and wrap.' Below this, it states 'Recipe contains pictures and instructions for the user and process specific data needed in production and recipe calculations.' and 'Recipes are version controlled, follow approval process (manual or automatic) and do have multiple alternatives to support different ways to produce same end product.' At the bottom, it says 'Production Recipes are supporting Sub-Recipe'. On the right side, there's a 'Congratulations!' message with a 'You did it!' and a 'CONGRATULATIONS!' banner. Below the banner, there's a table with columns for 'Material', 'Recipe', 'Status', 'Version', 'Created by', 'Created on', 'Last modified by', and 'Last modified on'. The table contains several rows of data. At the bottom of the interface, there's a 'Next' button and a '11 of 18' indicator.

E-Learning Sneak Peak - Avatars for Your Viewing Pleasure & Large Language Model (LLM)

E-Learning Sneak Peak - Avatars for Your Viewing Pleasure & Large Language Model (LLM)

E-Learning Example – TIPS MES

Giới thiệu đến E-learning

Trong khóa học này, chúng ta sẽ đề cập đến sự thay đổi địa điểm kho của các đơn vị hàng như cuộn giấy lớn, cuộn giấy nhỏ, hoặc các kiện hàng đã được đóng gói.

Chào mừng bạn đến với khóa học E-learning cấp độ 3 của TIPS PTS!

Thay đổi kho hàng tự động

Dựa trên các bước sản xuất, việc thay đổi vị trí một cách tự động cần có các thông tin sau:

- Bước sản xuất tiếp theo (Next Hand)
- Máy sản xuất tiếp theo (Next Process)
- Kho hàng tiếp theo (Next Warehouse)
- Địa điểm kho hàng tiếp theo (Next Warehouse Location)

Thay đổi kho hàng tự động

Dựa trên các bước sản xuất, việc thay đổi vị trí một cách tự động cần có các thông tin sau:

Kết thúc khóa học trực tuyến

Xin chúc mừng bạn đã hoàn thành khóa học trực tuyến!

Để sống kết, chúng ta hãy xem lại những gì đã học được:

- ✓ Bạn đã học được cách thay đổi vị trí kho hàng tự động trong PTS.
- ✓ Bạn nắm được cách thay đổi vị trí kho hàng thủ công trong PTS.

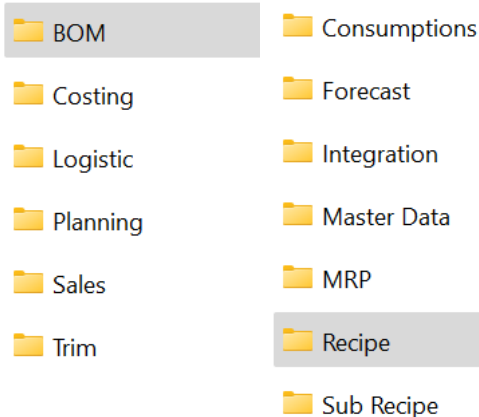

Tiếp đến, bạn có thể tiếp tục với các khóa học trực tuyến khác cho những trường hợp sử dụng khác trong PTS. Ngoài ra, bạn có thể học các cấp độ khác nhau để hỗ trợ việc sử dụng PTS.

You did it!
CONGRATULATIONS!

Generative AI/ChatGPT Enables Major Change Accessing Documentation and Information

Past

Master Data for Recipe.docx

Production Recipe.docx

Standard Recipe.docx

Using time to find the needed document.
Read the entire document(s) to find the information for which the action needs to be done.

Now

Using your words, directly ask what you need in your own language and get the right information.

Improve efficiency and reduce time to implement best practices !!!

Introducing TIPS Copilot – Continuously Available Tool Integrated with TIPS MES

Knowledge Support

„Where can I book consumptions?“

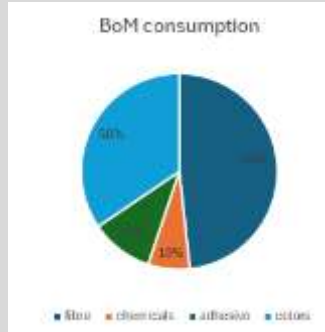

It provides information from external resources such as documentation, application reports, Wiki, and E-Learnings, along with links to the relevant sources.

Ad-hoc Reporting

„Show the BoM consumption per raw material group for this month in a pie chart“

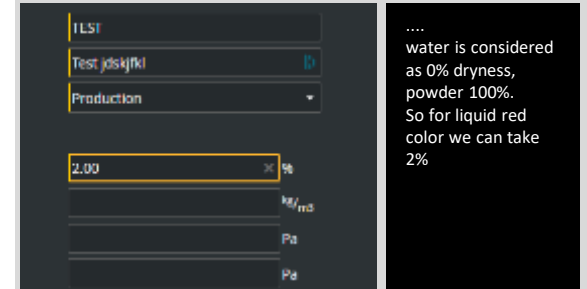

Provides ad-hoc creation and adjustment of graphical data insights.

Work Assistant

„Guide me through the creation of raw material“

Provides AI guidance in an interactive chat for filling in TIPS forms or any other user actions within TIPS.

AI/ML Predicting Paper Reel/Roll Quality with Soft Sensors

CHALLENGE

Needed measurements can not be done online
Lack of information resulting to over loss
Ultimately customer claims increase, damaging reputation

BENEFITS

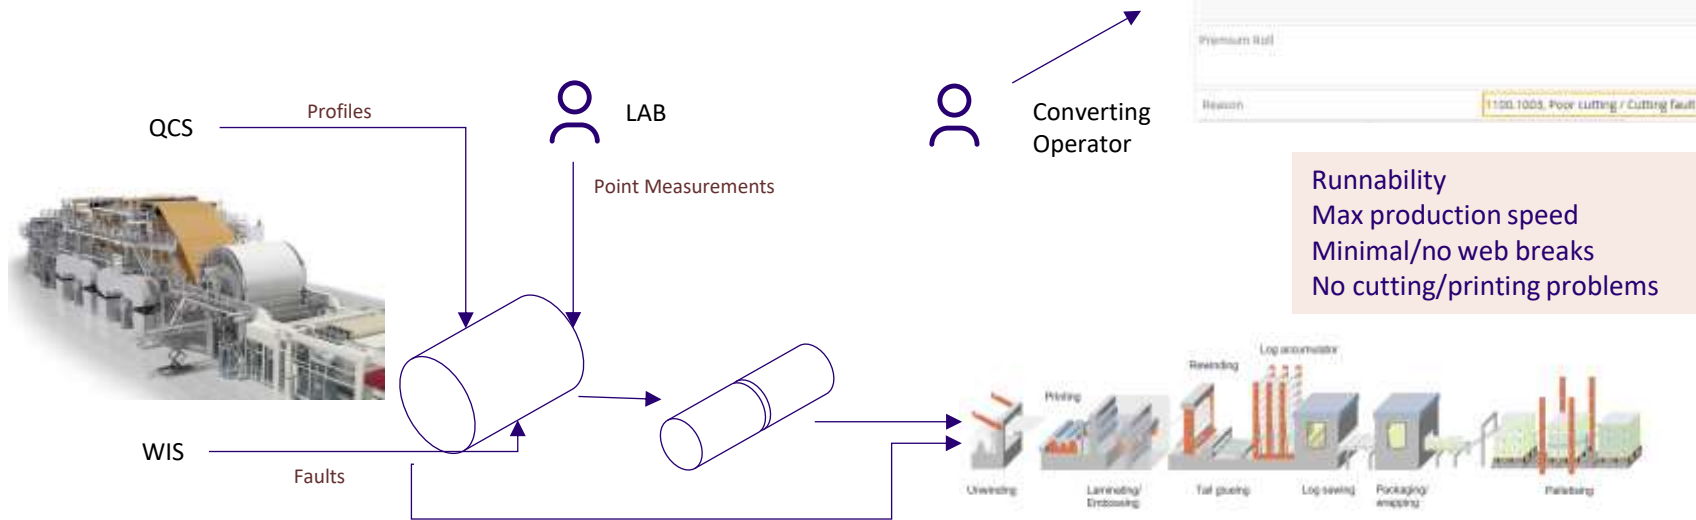

More sellable production
Increased customer satisfaction and loyalty
Increased production efficiency
Enabling process improvements

SOLUTION

AI based soft sensors to predict selected quality properties.
Algorithm learns continuously
Users' notifications.

SMART Runnability Concept

Runnability
 Max production speed
 Minimal/no web breaks
 No cutting/printing problems

All quality data of the machine reels is collected for analytics: full profiles, full WIS data and all laboratory measurements.

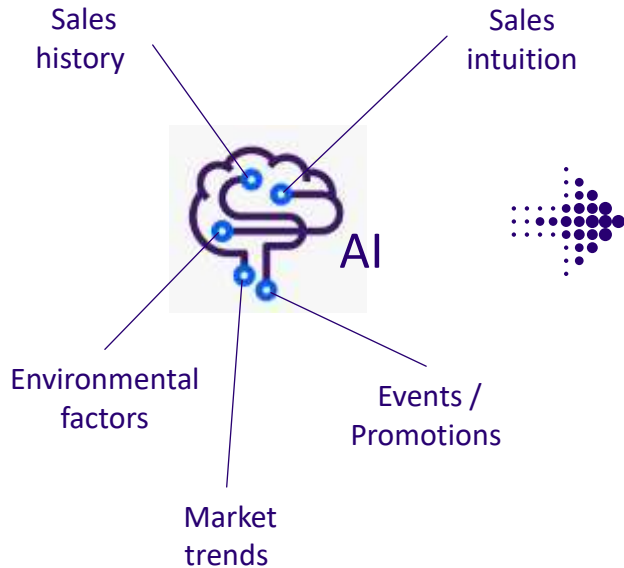

Operator classification of rolls to non-premium with reason code.
 Production speed in converting.
 ...

After training AI predicts the runnability of the rolls.
 Operator can adjust the converting machine based on the prediction.

AI Powered Demand Forecasting

TIPS I-Plan combines statistical methods machine learning and big data to find the best method and the right data to get the best demand forecast.

DEMAND FORECAST

The demand forecast is the critical driver for paper production

Production

Inventory

Raw material

What to make, when ?
What to stock, where ?
What to buy, when ?

Get these right and you maximise margin and keep your customers happy

Sustainability Meets Digitalization

Sustainability + Digitalization – Lead the 5th Industrial Revolution

Sustainability

- Circular economy
- Renew, recycle, re-use, share
- Consumers, citizens, governments, partners, investors expect sustainability and will have influence

Technology

- AI
- IoT
- Cloud
- RPA
- ...

Business Transformation

- Industry 4.0 to 5.0
- Digital Twin
- Big data
- Empowered operators

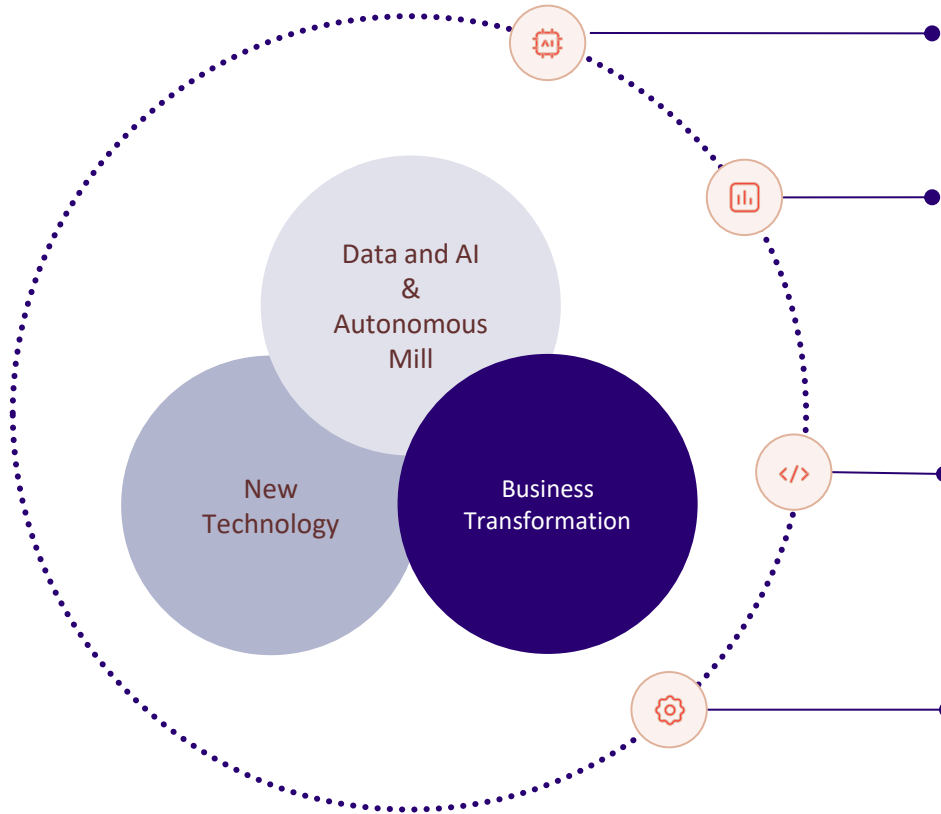

Digitalization + Sustainability will Drive the Business Transformation

Data and information as a key enabler

Design better
Source better
Produce better

as the core of the transformation

Summary & Takeaway Message

The Speed and Volume of change (markets & technology) is ever increasing.

The Data is more valuable than ever before - Do you have access & capability for the quality data insights? Ensure you have your digital operational backbone established.

The Dream – technology is already here for vast amount of practical data driven & AI assisted use cases – Step by Step Towards to the Autonomous Mill.

The Future - There is no sustainable world without digitalization – efficiency gains are imperative. Every efficiency improvement is a sustainability act.

Thank You !!!

Terima Kasih !!!

Reinventing the world for good together
